

Do you know the transplant facts?

Being on dialysis does not automatically put you on the transplant waitlist – you must get evaluated by a transplant center.

You do not have to wait until you are on dialysis to get evaluated for the transplant waitlist.

Kidneys from living donors are more likely to last longer than those from deceased donors.

Every transplant center has its own criteria to qualify for a transplant. If you do not qualify at one, you may try another.

More than 70% of all kidney transplants last at least 5 years and more than 40% last 10 years.

Age is less important than your overall health when being considered for a transplant. Do not assume you are too old until you are evaluated by a transplant center.

Want to know more of the facts?

Call a transplant center near you to “Talk Transplant” with the experts. Get information you need to see if transplant is the right choice for you!*
